

Metric Insights' Plugins

About Plugins

Metric Insights has a flexible plugin architecture that allows us to connect to many different BI tools, web applications, and other data sources.

In some cases it is necessary to run a [Remote Data Processor](#) (RDP) in order for Metric Insights to have access to your data source, on a machine inside your network. If a plugin requires an RDP, it will be noted below.

Supported Plugin List

Capabilities / Software	Data	Object List	Filters	Report Images	iFrame Embedding	OAuth 2.0	Automated Content Synchronization	Metadata Field Capture	Notes	Encryption
-------------------------	------	-------------	---------	---------------	------------------	-----------	-----------------------------------	------------------------	-------	------------
